

Abstract of the Disclosure:

A method for configuring a configurable hardware block includes implementing commands and/or command sequences of a program to be executed. The implementing step includes

- 5   ascertaining a given type of subunit of a configurable hardware block, the given type of subunit being required for executing a respective command, selecting, if available, a subunit of the given type of subunit, configuring configurable connections provided around the subunit selected in the
- 10   selecting step, if the subunit of the given type of subunit is found in the selecting step, and ascertaining configuration data with the step of implementing the commands and/or command sequences. The configurable hardware block is configured by using the configuration data.
